Habitat Restoration Services

- Restoration & Enhancement
- Riparian Habitat Restoration & Enhancement
- Salt/Freshwater Marsh Restoration & Enhancement
- Water Resources Engineering
- Upland Re-vegetation
- Terrestrial & Aquatic
- Weed Management
- Wetland Restoration & Water Treatment Marshes

ESA is a regional leader in habitat restoration and design services. Our interdisciplinary team, which includes ecologists, hydrologists, planners, landscape architects, and GIS specialists, has worked together to produce successful designs often with innovative techniques. We frequently work in partnership with various stakeholders to develop effective strategies for stabilizing erosion, alleviating flooding, improving habitat conditions, and protecting sensitive areas.

ESA's habitat restoration specialists offer a deep understanding of the environmental conditions that affect habitats and how they can be best manipulated to improve habitat quality. Our specialists are skilled in the use of biostabilization techniques, and have used these techniques successfully in a wide variety of applications. Our team is also very experienced in design of wetlands, streams, back channel habitat, and placement of large woody debris.

We are well-versed in helping to implement the designs we create, providing our clients with construction related services that support project objectives and ensure compliance with environmental permitting. ESA's services include construction documentation, supervising landscape contractors, inspecting materials work, conducting post construction monitoring, and recommending maintenance actions.
